— WHAT WORKS

Layer names and sheet templates

Years of consistent layer naming and sheet setup give an AI tool a clean pattern to follow instead of guessing at your conventions.

— WHAT WORKS

Detail libraries

A well maintained detail library is the highest quality example set a firm already owns, no extra work required to create it.

— WHAT DOESN'T

Sloppy standards, sloppy output

Inconsistent naming and ad hoc formatting teach the model your inconsistencies, then hand the blame to the tool instead of the housekeeping.

Fund the housekeeping nobody funds

Cleaning up standards used to be a chore with no budget line. It is now the asset that decides whether AI output is usable.

Full breakdown at the link in bio.
