INDUSTRY RESEARCH

17.2 percent of US construction businesses used AI in the last two weeks.

SWIPE

WHAT THE NUMBER COVERS

Construction sits 6.6 points behind the all sector rate of 23.8 percent.

The Census Bureau asked about the two weeks of September 7 to 20, 2026. In construction, NAICS sector 23, 17.2 percent said yes, 75.5 percent said no, and 7.3 percent did not know. The panel covered about 200,000 employer businesses, weighted to all US employer businesses. The standard error on the construction estimate is 0.72 percent, so the gap behind the all sector rate is wider than sampling noise. Source: US Census Bureau, Business Trends and Outlook Survey, October 8, 2026.

AECENTRIC

Plan for the firm you actually have.

Roughly three quarters of construction businesses reported no AI use at all in that two week window, so a rollout built on the assumption that everyone has already started will misread the room. We start with one workflow your team can already measure, confirm the baseline by hand, then test AI against it. That gives you a number you can defend when leadership asks what changed.
