

— PRACTICE

**Before you upload
a client's drawings
to any AI tool, read
the terms.**

SWIPE ►

— WHAT TO CHECK

Where does the data go

Some AI tools use your inputs to train their next model. Others keep it walled off. The difference is buried in the terms of service.

— WHAT TO CHECK

Who owns the output

Confirm the tool does not claim rights to drawings, specs, or calculations you feed it or generate with it.

— WHAT TO CHECK

What your contracts already promise

Many client agreements already restrict where project data can go. An AI tool does not get an exception just because it is convenient.

— A E C E N T R I C

Governance comes first, not last

If you are enabling AI at scale across your firm, data and AI governance is the starting point, not something you backfill after the rollout.
