POLICY

ASCE's new AI roadmap draws five lines no tool crosses

SWIPE

THE RED LINES

Accountability is never delegated.

ASCE's AI Roadmap for Application in Civil Engineering, AI RACE, secured support from the ASCE Board of Direction on October 17, 2026. Section 2 sets five human red lines that hold at every capability level. The first, verbatim: AI does not hold responsible charge or seal, sign, or certify engineering work. The second: no AI output is relied on until a competent person has verified it, with depth proportional to the consequence of error, and its use is recorded. Source: ASCE, AI RACE, October 2026.

AECENTRIC

Write the red lines into your firm's policy

Two of ASCE's five lines are a policy on their own: nothing AI produces gets sealed, and nothing gets relied on until a named person has checked it and recorded that they did. If your firm's AI policy does not say both, it is not finished. We help firms write the version their licensed engineers will sign.
