40 of 41 data center ballot measures went against the industry

SWIPE

Three governors-elect promised to pause new projects

On November 3, voters sided against data centers in 40 of 41 local ballot measures across 10 states. Governors-elect in Texas, Ohio and Georgia campaigned on pausing new projects: Texas until lawmakers pass new rules, Ohio unless developers cover all utility costs, Georgia while the effect on power bills is assessed. All three take office in January. Sources: CNBC with Ballotpedia, Texas Tribune and Fortune, November 4, 2026. Results are unofficial until certified.

AECENTRIC

The new bargain is power, water and cost

This reads less like a ban than new terms: pay for your own power, protect the water, show the community the cost. For AEC firms on data center work in these states, utility cost, water and community impact studies move to the front of the schedule. We help firms plan for it.
