

— MYTH VS REALITY

**Myth: AI is too
risky for a licensed
firm to use**

SWIPE ►

— THE REAL RISK

Your stamp was never insured by the tool

State boards discipline engineers for signing off on unreviewed work, not for the software sitting behind it, and that standard predates AI by decades.

— THE REAL RISK

Unreviewed work is the liability, not AI

Firms have been sanctioned for rubber stamping a junior engineer's drawings or an unchecked consultant calc long before AI entered the picture, the risk was always weak review.

— THE REAL RISK

Avoiding AI does not remove the risk, it just removes the upside

An engineer of record who stops reviewing carefully is the exposure, whether the first draft came from a junior staffer or a model, and skipping the tool does not fix that habit.

Risk management starts with review, not avoidance

We help licensed firms build AI workflows where the engineer of record stays accountable at every step, because that is the only version of this that holds up.
