

— AI ADOPTION

**How long does it
take to learn
Claude? About a
day.**

SWIPE ►

— WHAT WORKS

Treat it like onboarding, not installing

A new AI tool is not software you switch on. It is a new team member you spend real time training.

Day one: your standards and vocabulary

Feed it your firm's terminology, formatting rules, and examples of the output you actually want, the same way you would brief a new hire.

— WHAT WORKS

Then keep refining

The first day gets you close. Ongoing correction over the following weeks is what gets it right.

— A E C E N T R I C

Skip the install and hope approach

Firms that budget a real training day see faster, more reliable results than firms that just hand out logins.
