

— POWER AND SITING

**The data center
constraint
stopped being
technical and
became political**

SWIPE ►

— WHAT MOVED THIS MONTH

September 16: the US House voted 417 to 3

The Ratepayer Protection Act passed almost unanimously, requiring large data centers to cover the grid upgrades they trigger. On September 21, Texas widened its own pause from grid hookups to environmental permits too.

Three jurisdictions, one message in six weeks

New York's moratorium in July, Texas' pause in August then September, and now a near unanimous federal vote. Siting, water and public consent now gate these projects more than engineering does. If your firm pursues this work, that belongs in the go or no go math.
