

— INDUSTRY DATA

**McKinsey: AI could
unlock \$228 billion
a year in AEC by
2030**

SWIPE ►

— WHY NOW

Productivity barely moved in twenty years

Construction productivity grew 10% from 2000 to 2022. Manufacturing grew 90% in the same stretch. AI is the first real chance to close that gap.

— WHOSE JOB IS THIS

This is not an IT project

Your IT team already has AI, they are writing code with tools like Claude Code and Codex. The bigger opportunity sits with your estimators, engineers, and project managers.

— DO IT RIGHT

A license for everyone is table stakes

Give every seat a real enterprise license. Never let teams fund their own personal or shadow subscriptions, that is how a firm loses control of its data.

AI adoption is a business decision

Handing it to IT and hoping people find their own tools is how firms fall behind and lose control of their data at the same time.
