

— PRACTICE

**Automate
submittal review
without approving
anything**

SWIPE ►

— WHAT WORKS

Five stages, one job each

Intake, classification, spec check, risk flagging, and routing. The tool never marks a submittal approved.

Four rules keep it honest

No auto-approval, no silent overrides, a full audit trail, and mandatory human sign-off on anything flagged.

— WHAT WORKS

Where the time actually goes

Low-risk, repetitive submittals get triaged fast, freeing engineers to focus on the ones that need real judgment.

— A E C E N T R I C

The engineer still decides

AI can sort a queue. It cannot carry your stamp or your liability.
